Tutorial video

(coming soon!)

Basics

A for loop is a super powerful coding tool. In a for loop, R loops through a chunk of code for a set number of repititions.

A super basic example:

- [1] 1
- [1] 2
- [1] 3
- [1] 4
- [1] 5

Here's an example of a pretty useless for loop:

```
[1] "I'm just repeating myself."
[1] "I'm just repeating myself."
```

- [1] "I'm just repeating myself."
- [1] "I'm just repeating myself."
- [1] "I'm just repeating myself."

This code is saying:

- For each iteration of this loop, step to the next value in ${\tt x}$ (first example) or 1:5 (second example).
- Store that value in an object i,
- and run the code inside the curly brackets. Repeat until the end of x.

Look at the basic structure:

- In the for() parenthetical, you tell R what values to step through (x), and how to refer to the value in each iteration (i).
- Within the curly brackets, you place the chunk of code you want to repeat.

Another basic example, demonsrating that you can update a variable repeatedly in a loop.

- [1] 4
- [1] 16
- [1] 256
- [1] 65536
- [1] 4294967296

Another silly example:

- [1] "Keri is pretty cool!"
- [1] "Deb is pretty cool!"
- [1] "Ken is pretty cool!"

Exercise 1

Use this space to practice the basics of for loop formatting.

First, create a vector of names (add at least 3)

Using the examples above as a guide, create a for loop that prints the same silly statement about each of these names.

- [1] "Lady Gaga has cooties!"
- [1] "David Haskell has cooties!"
- [1] "Tom Cruise has cooties!"

Using for loops with data

These silly examples above do a poor job of demonstrating how powerful a for loop can be.

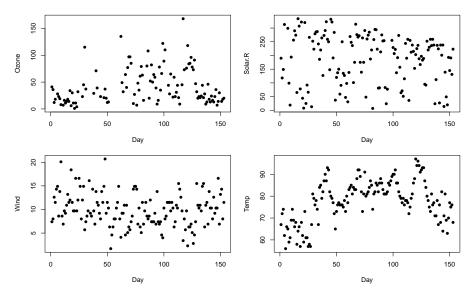

Multi-panel plots

For example, a for loop can be a very efficient way of making multi-panel plots.

Let's use a for loop to get a quick overview of the variables included in the airquality dataset built into R.

	Ozone	${\tt Solar.R}$	Wind	Temp	Month	Day
1	41	190	7.4	67	5	1
2	36	118	8.0	72	5	2
3	12	149	12.6	74	5	3
4	18	313	11.5	62	5	4
5	NA	NA	14.3	56	5	5
6	28	NA	14.9	66	5	6

Looks like the first four columns would be interesting to plot.

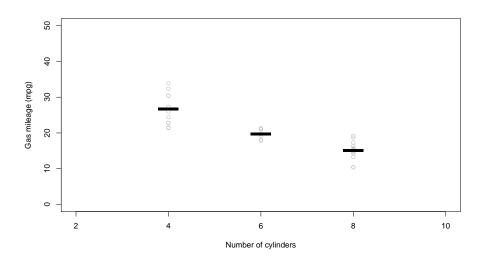

Tricky plot solutions

for loops are also useful for plotting data in tricky ways. Let's use a different built-in dataset, that shows the performance of various car make/models.

	mpg	cyl	disp	hp	drat	wt	qsec	٧s	\mathtt{am}	gear	carb
Mazda RX4	21.0	6	160	110	3.90	2.620	16.46	0	1	4	4
Mazda RX4 Wag	21.0	6	160	110	3.90	2.875	17.02	0	1	4	4
Datsun 710	22.8	4	108	93	3.85	2.320	18.61	1	1	4	1
Hornet 4 Drive	21.4	6	258	110	3.08	3.215	19.44	1	0	3	1
Hornet Sportabout	18.7	8	360	175	3.15	3.440	17.02	0	0	3	2
Valiant	18.1	6	225	105	2.76	3.460	20.22	1	0	3	1

Let's say we want to see how gas mileage is affected by the number of cylinders a car has. It would be nice to create a plot that shows the raw data as well as the mean mileage for each cylinder number.

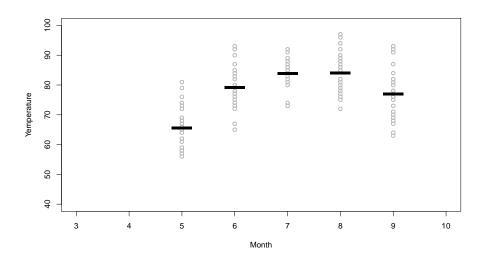

[1] 6 4 8

Exercise 2

Now try to do something similar on your own with the airquality dataset. Use for loops to create a plot with Month on the x axis and Temperature on the y axis. On this plot, depict all the temperatures recorded in each month in the color grey, then superimpose the mean temperature for each month.

Using a for loop with more complex data

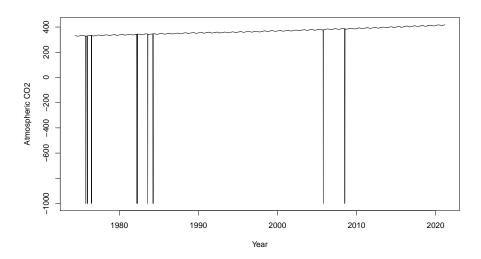

Here's another good example of the power of a good for loop.

First, read in some cool data.

	year	${\tt month}$	day_of_month	day_of_year	year_dec	<pre>frac_of_year</pre>	C02
1	1974	5	26	145.4890	1974.399	0.3986	332.95
2	1974	6	2	152.4970	1974.418	0.4178	332.35
3	1974	6	9	159.5050	1974.437	0.4370	332.20
4	1974	6	16	166.5130	1974.456	0.4562	332.37
5	1974	6	23	173.4845	1974.475	0.4753	331.73
6	1974	6	30	180.4925	1974.495	0.4945	331.68

This is the famous Keeling Curve dataset: long-term monitoring of atmospheric CO2 measured at a volcanic observatory in Hawaii.

Try plotting the Keeling Curve:

There are some erroneous data points! We clearly can't have negative CO2 values. Let's remove those and try again:

What's the deal with those squiggles? Let's investigate!

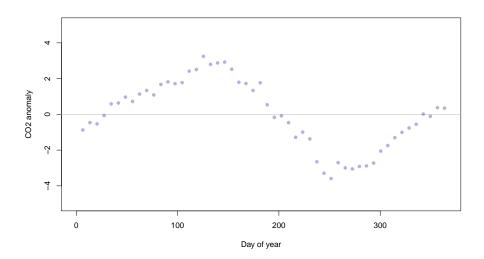

Let's look at the data a different way: by focusing in on a single year.

	year	${\tt month}$	day_of_month	day_of_year	year_dec	<pre>frac_of_year</pre>	C02
816	1990	1	7	6.4970	1990.018	0.0178	353.58
817	1990	1	14	13.5050	1990.037	0.0370	353.99

```
0.0562 353.92
818 1990
             1
                          21
                                 20.5130 1990.056
819 1990
                          28
                                 27.4845 1990.075
                                                         0.0753 354.39
                                 34.4925 1990.094
                                                         0.0945 355.04
820 1990
                          4
821 1990
                                 41.5005 1990.114
                                                         0.1137 355.09
                          11
```

[1] 354.4538

```
[1] -0.87384615 -0.46384615 -0.53384615 -0.06384615
                                                     0.58615385
                                                                0.63615385
                0.72615385
                            1.13615385 1.33615385
    0.96615385
                                                     1.08615385
                                                                1.67615385
                 1.71615385
                             1.77615385
                                         2.41615385
                                                     2.50615385
[13]
     1.81615385
                                                                3.24615385
[19]
    2.79615385 2.87615385
                            2.92615385 2.52615385
                                                    1.79615385 1.72615385
[25] 1.33615385 1.76615385 0.53615385 -0.16384615 -0.08384615 -0.46384615
[31] -1.28384615 -0.99384615 -1.37384615 -2.65384615 -3.29384615 -3.59384615
[37] -2.70384615 -2.99384615 -3.05384615 -2.91384615 -2.88384615 -2.72384615
[43] -2.05384615 -1.74384615 -1.30384615 -1.00384615 -0.76384615 -0.55384615
[49] 0.01615385 -0.11384615 0.37615385 0.34615385
                                                            NA
```

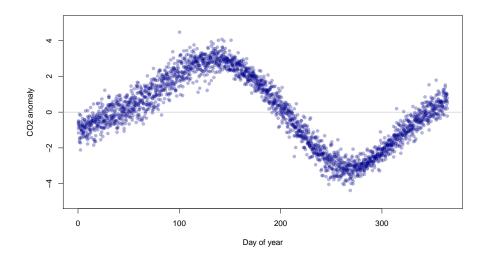

But this only shows one year of data! How can we include the seasonal squiggle from other years?

Let's use a for loop!

OK – let's redo that graph and add a for loop into the mix:

```
[1] "1974" "1975" "1976" "1977" "1978" "1979" "1980" "1981" "1982" "1983" [11] "1984" "1985" "1986" "1987" "1988" "1989" "1990" "1991" "1992" "1993" [21] "1994" "1995" "1996" "1997" "1998" "1999" "2000" "2001" "2002" "2003" [31] "2004" "2005" "2006" "2007" "2008" "2009" "2010" "2011" "2012" "2013" [41] "2014" "2015" "2016" "2017" "2018" "2019" "2020" "2021" NA
```

Beautiful! So how do you interpret this graph? Why does the squiggle happen every year?

Review assignment

First, read in and format some other cool data. The code for doing so is provided for you here:

This dataset, freely available from World Bank, shows the renewable electricity output for various countries, presented as a percentage of the nation's total electricity output. They provide this data as a time series.

26.0.1 Summarize columns with a for loop

Task 1: Use a for loop to find the change in renewable energy output for each nation in the dataset between 1990 and 2015. Print the difference for each nation in the console.

```
[1] "year" "World" "Australia" "Canada"
[5] "China" "Denmark" "India" "Japan"
[9] "New_Zealand" "Sweden" "Switzerland" "United_Kingdom"
[13] "United_States"
```

```
[1] "World : 3% change."
[1] "Australia : 4% change."
```

```
[1] "Canada : 1% change."
[1] "China : 4% change."
[1] "Denmark : 62% change."
[1] "India : -9% change."
[1] "Japan : 5% change."
[1] "New_Zealand : 0% change."
[1] "Sweden : 12% change."
[1] "Switzerland : 7% change."
[1] "United_Kingdom : 23% change."
[1] "United_States : 2% change."
```

Task 2: Re-do this loop, but instead of printing the differences to the console, save them in a vector.

```
[1] "World : 3% change."
[1] "Australia : 4% change."
[1] "Canada : 1% change."
[1] "China : 4% change."
[1] "Denmark : 62% change."
[1] "India : -9% change."
[1] "Japan : 5% change."
[1] "New_Zealand : 0% change."
[1] "Sweden : 12% change."
[1] "Switzerland : 7% change."
[1] "United_Kingdom : 23% change."
[1] "United_States : 2% change."
[1] "United_States : 2% change."
[1] 3.49241703 3.98181045 0.63273122 3.51887728 62.33064943 -9.14624362
[7] 4.73004321 0.07524008 12.26263811 7.21543884 23.01128298 1.69994636
```

Multi-pane plots with for loops

Practice with a single plot

Task 3: First, get your bearings by figuring out how to use the df dataset to plot the time series for the United States, for the years 1990 - 2015. Label the x axis "Year" and the y axis "% Renewable". Include the full name of the county as the main title for the plot.

```
year World Australia Canada China Denmark India Japan
1 1990 19.36204 9.656031 62.37872 20.40794 3.175275 24.48929 11.254738
2 1991 19.23357 10.598201 61.41041 18.47113 2.892325 22.80740 11.856735
3 1992 19.15840 10.066865 61.67921 17.58468 4.398464 20.75265 10.162888
4 1993 19.78795 10.549144 61.72233 18.12526 4.730088 19.55881 11.454528
```

Now loop it!

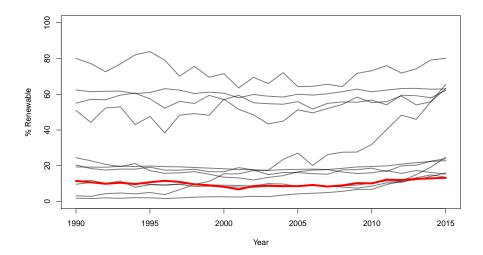

Task 4: Use that code as the foundation for building up a for loop that displays the same time series for every country in the dataset on a multi-pane graph that with 4 rows and 3 columns.

Now loop it differently!

Task 5: Now try a different presentation. Instead of producing 12 different plots, superimpose the time series for each country on the *same single plot*.

To add some flare, highlight the USA curve by coloring it red and making it thicker.

Writing functions

Working with text

Working with dates & times

Working with factors

Cleaning messy data

Matrices & lists

Pipes

Exporting data & plots

Part VII Interactive dashboards

Intro to Shiny apps

Shiny dashboards

Data entry apps

Part VIII

Databases

Introduction

- **38.1** What
- 38.2 Why
- 38.3 When
- 38.4 When not

Platforms

- 39.1 PostgreSQL
- $39.2 \quad mySQL$
- 39.3 SQLite

Alternatives

40.1 NoSQL

Practices

Spinning up a local DB

Part IX Documenting your work

R Markdown

Reproducible research

Automated reporting

Formatting standards

- 45.1 Tables
- 45.2 Figures
- 45.3 Captions

Part X

Version control and teamwork

What is version control?

What is Git?

- 47.1 Repositories
- 47.2 Github

Standard git operations

A git workflow

Other git platforms

Part XI Writing about data

Types of writing

- 51.1 Grant proposals
- 51.2 Reports and publications
- 51.3 Fundraising
- 51.4 Press releases

Elements of style

Sections of a report

- 53.1 Abstract
- 53.2 Introduction
- 53.3 Methods
- 53.4 Results
- 53.5 Discussion
- 53.6 Other elements
- 53.6.1 Acknowledgments
- 53.6.2 Literature Cited
- **53.6.3** Tables
- 53.6.4 Figures
- 53.6.5 Supplementary Materials

Part XII Creating websites

Part XIII Advanced skills

Mapping

Geographic computing & GIS

Statistical modeling

Apply family

Iterative statistics

Iterative simulations

Image analysis

Machine learning

Template

Learning goals

- Item 1
- Item 2
- Item 3

Tutorial video

Bangarang - Crew Briefing from Luke Padgett on Vimeo.

Basics

Exercise 1

Review assignment

Introduce data
